GraphOn Corp. Files Lawsuit against Juniper Networks for Patent Infringement

SANTA CRUZ, CA, USA – GraphOn Corporation (OTCBB: GOJO.OB), a leading worldwide developer of server-based application publishing and Web-enabling software solutions, announced today that it has filed a lawsuit against Juniper Networks, Inc., alleging infringement of three GraphOn patents.

The complaint, filed in United States District Court in the Eastern District of Texas, alleges infringement of U.S. Patent Nos. 5,826,014, 6,061,798 and 7,028,336 which protect GraphOn's fundamental network security and firewall technologies. The suit alleges that Juniper Networks' Hardware Security Client and its NetScreen, SSG and ISG series of firewall products infringe on the GraphOn patents. The suit seeks preliminary and permanent injunctive relief along with unspecified damages and fees.

In February 2005, GraphOn obtained the subject patents as part of its acquisition of Network Engineering Software, Inc. (NES). In addition to the subject patents, GraphOn acquired intellectual property, other patents, and patent applications resulting from more than ten years of development effort by NES.

The lawsuit filed against Juniper Networks follows the filing of a lawsuit against AutoTrader.com, Inc. in November 2005 for infringement of two other patents acquired in the NES acquisition that protect GraphOn's unique method of maintaining an automated and network accessible database.

"We have been very pleased with the acquisition of NES," said Robert Dilworth, GraphOn's chief executive officer. "The acquisition has provided us with technology that has application both to our current GO-Global product line and to the development of new products. Aggressively protecting the acquired technology is important to maximizing its value to GraphOn."

About GraphOn Corporation

For over a decade, GraphOn has been an innovator of cost-effective, advanced solutions that help customers access applications from anywhere. GraphOn's high-performance software provides fast remote access, cross-platform connectivity, and a centralized architecture that delivers a dramatically lower cost of ownership. The company's solutions run under Microsoft (MSFT) Windows, Linux, and UNIX, including Sun (SUNW) Solaris, IBM AIX, Hewlett-Packard (HPQ) HP-UX, and more.
