GraphOn Awarded Two Additional U.S. Patents Relating to Hosting of Personal Web Pages for a Fee and Remotely Configuring Firewalls using a Web Browser

SANTA CRUZ, CA, USA – Sept. 12, 2007 – GraphOn Corporation (OTCBB: GOJO.OB), a leading worldwide developer of server-based application publishing and Web-enabling software solutions, announced today that it has been issued two additional patents by the U.S. Patent and Trademark Office. Today's announcement brings the total number of patents owned by GraphOn to nineteen.

U.S. Patent 7,269,591 is directed towards the creation and hosting of a personal home page on the Internet for a fee. The patent protects HTML-based technology used to provide an interface between a user and the Web server hosting the home page. Using the HTML technology, users may create and index their home pages in a category of their choosing.

U.S. Patent 7,269,847 concerns remotely configuring firewalls using a standard Web browser. The patent protects fundamental technologies related to the editing and maintaining of firewall configuration files using an HTML-based interface, such as a Web browser. In the case of firewalls protecting more than one host, each host may be configured separately through the browser.

"These two new patents add breadth and strength to GraphOn's already impressive portfolio of patents that describe very fundamental and seminal technologies concerning the Internet, firewalls and related areas," said Robert Dilworth, GraphOn's chief executive officer. "Continued growth of our patent portfolio represents a strategically important activity for the company, and we expect that our total number of patents will continue to increase in the future. Our objective is to maximize the value of GraphOn's patent holdings, to contribute technology towards our current GO-Global product line, and to provide opportunities for development of new products."

About GraphOn Corporation

For over a decade, GraphOn has been an innovator of cost-effective, advanced solutions that help customers access applications from anywhere. GraphOn's high-performance software provides fast remote access, cross-platform connectivity, and a centralized architecture that delivers a dramatically lower cost of ownership. The company's solutions run under Microsoft (MSFT) Windows, Linux, and UNIX, including Sun (JAVA) Solaris, IBM AIX, Hewlett-Packard (HPQ) HP-UX, and more.
