SOLUTION BRIEF:
LEGAL

ACCESS APPLICATIONS
ANYWHERE
>>> *WITH GO-GLOBAL*

GO-GLOBAL LEGAL APPLICATION DELIVERY

GO-Global® is the simple and secure application access solution that extends the reach of Windows, UNIX* and Linux* applications across your LAN, WAN, VPN, private cloud, or the Internet. GO-Global efficiently and cost-effectively delivers legal applications and documents to cross-platform and mobile clients running Windows, Linux, Mac OS X, iOS, Android, or any Web browser.

LEGAL APPLICATION DELIVERY CHALLENGES

- Privacy, security, and ease of use are key concerns within the legal community.
- Typical challenges include managing confidential client information and securely accessing contracts and legal briefs from a remote location.

EASE OF USE

- GO-Global is synonymous with simplicity. Our customers tell us: "With GO-Global, no training is required for our end-users. There's just one icon to click and it just works."
- GO-Global is intuitive. That means less support calls, lower desktop failure rates, and more free time to focus on the primary tasks.
- GO-Global is the simple solution that not only makes it easy for the administrator, but also focuses on end-user simplicity. One click installation, automatic client updates, and an intuitive GUI are just a few examples of GO-Global's simplicity.

PRIVACY AND SECURITY

- In the legal field, it is extremely important to protect the client-lawyer information contained in the GO-Global-delivered applications and documents That's why GO-Global makes it easy to create a private cloud** to keep sensitive material in a secure data center.

"Our users are quite pleased with GO-Global's performance and ease of use...and that translates to greater overall productivity for the company."

- Adam Biscoe, IT Manager
Mayo and Perkins Law Firm

- Using GO-Global, lawyers can access contracts and other documents in the firm's data center without the sensitive assets leaving the secure central location**.
- There's no need to send contracts by e-mail and worry about misuse, incorrect addresses, or wrong versions. Just send the link to the secured workspace and control who can access it**.
- Unlike Citrix and Microsoft who use the common RDP communications protocol, GO-Global utilizes the patented RXP protocol. This high-performance protocol is proprietary, so existing RDP-based malicious tools cannot access GO-Global sessions.
- GO-Global incorporates four levels of SSL security (56-bit to 256-bit AES), allowing for higher certifications without third-party software.
- GO-Global uses a single TCP port for all transmissions, so there's only one place to protect.

AFFORDABILITY

- GO-Global is offered on a cost-effective, concurrent licensing basis.
- GO-Global facilitates substantial cost savings due to server consolidation, reduced application support costs, better cash control, and improved accounting reconciliations.
- GO-Global leverages the existing IT infrastructure, saves money by eliminating the need to upgrade older PCs, and offer better overall utilization of existing computing resources.
